

ABOUT THE FUND

Proxy Renewable Long / Short Energy is a thematic ESG fund focusing on the Energy Transition theme. It is an actively managed AIF fund that invests globally in public equities. The fund is directional, utilises both long and short positions and invests in renewable energy and energy technology sectors. The investment strategy is based on a combination of top down thematic and bottom-up fundamental growth-oriented approach. Investment decisions are made on a discretionary basis but supported quantitatively.

Data as of 30 November 2025, Proxy P for EUR A share class. EUR A NAV 158.84, Strategy AUM \$42m USD.
The fund is denominated in EUR and offers unhedged and hedged share classes in EUR/USD/SEK/GBP/CHF/ISL. The underlying equity holdings are not currency hedged. Hedged share classes minimize tracking error to the EUR share class.
The fund was launched on the 14th December 2018 with SEK A share class only. EUR and USD share classes opened during 2020 and therefore, the NAV and performance attribution before launch date of these share classes have been derived by currency converting the official SEK A share class NAV into EUR and USD.
Past performance is no guarantee for future returns. Investments involve varying degrees of risk and there can be no assurance that an investment will be profitable. Market capitalisation and geographical exposure are represented by net figures. Sector exposure is represented by gross figures.

COMMENT BY THE PORTFOLIO MANAGER

Markets in general

The positive trend that had persisted since spring paused in November. Markets declined at the start of the month following a hawkish signal from the Federal Reserve, which stated that it is not at all certain that upcoming meetings will automatically result in rate cuts. For the Fed, the overall picture is decisive, balancing economic activity and the labor market on one hand, and inflation on the other. Inflation has proven more “sticky” than expected this year, even as the labor market and the broader economy have slowed significantly.

However, equity markets recovered toward the end of the month as data indicated that the economy is not as stable or robust as the Fed suggests. There is also growing concern surrounding the so-called AI trade, which has a substantial impact on equity markets given that the Mag7 companies carry heavy index weightings. Much of today’s elevated market valuations are supported by these companies, implying that expectations for future profit growth remain high. Should this growth fail to materialize, market valuations are too elevated.

The AI trade affects not only market performance but also the geopolitical landscape, as China is making significant efforts to develop domestic chips and, importantly, possesses advantages in power supply for future data centers. Even in a positive trend, risks remain sizeable and tangible. Historically, markets typically peak only once perceived risk has disappeared, when everyone has already bought in. Looking at inflation, interest rates, and risk appetite, we believe there is still further upside before reaching that point. Moreover, the Mag7 companies have yet to show any fundamental signs of losing momentum.

While the labor market has cooled to the extent that it is no longer generating new jobs, this is not the same as the economy entering a broad-based recession with widespread layoffs. Taking the full picture into account, we therefore remain constructive.

Sector Performance & Structural Risks

During the seven-month rally, our sector significantly outperformed broader equity markets. It was therefore unsurprising that the sector weakened meaningfully at the beginning of November, coinciding with the general market pullback. Our sector has long been sensitive to interest-rate developments, something we have written about frequently, and has also become increasingly correlated with market sentiment toward AI.

The aggressive build-out of AI data centers has only just begun, and it has become clear that they require massive amounts of electricity. Operators are willing to pay high prices for baseload power, provided it is available in the right locations and can be delivered immediately or in the near term. This comes at a time when net additions of new power-generation capacity have been limited in recent years. As a result, renewable energy and storage solutions have become highly topical once again.

Because supply is not keeping pace with demand, electricity prices are rising. We are already seeing this in the United States, where development has progressed the furthest, particularly in states such as Virginia, California, and Texas, where AI-DC clusters are expanding most rapidly. Extrapolating this trend ultimately leads to extreme power prices and/or blackouts. This is, of course, unacceptable, and we therefore expect new regulatory approaches and political intervention aimed at managing these challenges.

COMMENT BY THE PORTFOLIO MANAGER

It would be convenient to suggest simply building more baseload power, such as nuclear, hydropower, or natural-gas-fired generation, but long lead times make this insufficient as a standalone solution. We will need more of everything, and even so, electricity prices are likely to rise, attracting even more investment into the space. Ultimately, the world is undergoing rapid electrification, with AI at the forefront.

This has been our core thesis since launching the fund, and it is becoming increasingly evident.

What we welcome today is that the energy-transition shift is now grounded in commercial principles rather than political directives, something we view very positively. This marks a genuine paradigm shift. Historically, energy demand and economic growth were strongly correlated. From the post-war period through the 1980s, electricity demand grew faster than the economy due to industrialization and rising material wealth. From the 1990s onward, however, economic growth continued while electricity demand began to plateau, driven by technological efficiency gains, a growing services economy, and de-industrialization in the West in favor of emerging markets such as China and India.

That relationship is now reversing. Growth is expected to remain structurally low, while electricity demand is set to accelerate. This new era began with the Paris Agreement in 2015 but is now gaining real momentum, driven by AI. Broad electrification will also increase, as the cost and performance of new technologies have reached levels necessary to enable widespread adoption.

COMMENT BY THE PORTFOLIO MANAGER

Proxy performance

The Fund returned 2.96% in the EUR A share class for November.

The fund delivered positive performance in November, despite the sector as a whole declining. This was partly a reaction to the previous month, in which we lagged the sector, and partly due to earlier trimming of certain positions we felt had appreciated too quickly. During the pullback early in the month, we took the opportunity to add several new holdings we had been monitoring for some time. These include companies integral to the expansion of grid infrastructure and transmission, critical components for enabling the global build-out of AI-DCs and general electrification.

We also increased exposure to companies within the solar and battery segments, which we expect to exhibit strong momentum in the coming years. We remain constructive on the sector in the near term, although individual months may bring setbacks. For this reason, we currently maintain high net exposure to the sector.

Fund Performance Drivers

The fund outperformed the sector as a result of strong stock selection and proactive repositioning during the early-month downturn. While we remain cautious regarding valuations relative to current earnings, our strategy focuses on the long-term profitability of individual companies, where we continue to see substantial upside potential.

During the month, the following holdings delivered particularly strong performance:

Vestas – A global leader in wind turbines. Delivered a strong report with improving margins and higher-than-expected order intake.

SQM – A South American lithium producer benefiting from rising battery production driven by electric vehicles and Battery Energy Storage Systems (BESS) systems. Lithium prices have recently recovered from low levels as inventory levels decline.

First Solar – The U.S. leader in solar equipment manufacturing, benefiting from rising electricity prices and trade-protection measures.

This is not a legal document and only for information. For full details see Proxy P SICAV prospectus which can be requested by Proxy P Management AB or the Fund administrator, European Fund Administration (EFA).

WARNING: The contents of this document have not been reviewed by any regulatory authority in Hong Kong. You are advised to exercise caution in relation to the document. If you are in any doubt about any of the contents of this document, you should obtain independent professional advice.

The Fund is not, and is not required to be, a registered foreign body corporate in Australia. The provision of this Report to any person does not constitute an offer of shares to that person or an invitation to that person to apply for share. Shares will only be offered in Australia to persons who are a sophisticated or professional investor for the purposes of section 708 of the Australian Corporations Act, a wholesale client for the purposes of section 761G or 761GA of the Australian Corporations Act, and a person whose ordinary business is to buy or sell shares, debentures, or interests in managed investment schemes, as principal or agent. This Report is not intended to be distributed or passed on, directly or indirectly, to any other class of persons in Australia. Shares subscribed for by investors in Australia must not be offered for resale in Australia for 12 months from allotment except in circumstances where the investor is also a sophisticated or professional investor and wholesale client and disclosure to that investor under the Australian Corporations Act would not be required. The information in this Report has been prepared for information purposes and sets out information relating to the offer of shares. It does not take into account any investor's objectives, financial situation or needs. Prospective investors in Australia should, before acting on the information in this Report, consider its appropriateness having regard to their objectives, financial situation and needs and confer with their professional advisors if in any doubt about their position.

This Report has not been prepared specifically for Australian investors. It may contain references to dollar amounts which are not Australian dollars, may contain financial information which is not prepared in accordance with Australian law or practices, may not address risks associated with investment in foreign currency denominated investments and does not address Australian tax issues. Any advice contained in this Report is provided by the Fund. The Fund does not hold an Australian financial services licence which authorises it to provide financial product advice in relation to shares in the Fund. No cooling off regime applies to an acquisition of fund shares.

Past performance is no guarantee for future returns. Investments involve varying degrees of risk and there can be no assurance that an investment will be profitable. Market capitalisation and geographical exposure are represented by net figures. Sector exposure is represented by gross figures.

The Fund has not been authorised or otherwise approved by the UK Regulator (as defined herein) and is not a recognised scheme (as defined in the Financial Services and Markets Act 2000 (as amended) of the United Kingdom (the “FSMA”). No application has been or is intended to be made for an authorisation order as defined in the FSMA in respect of the Fund and investors may not have the benefit of the Financial Services Compensation Scheme and other protections afforded by the FSMA or any of the rules and regulations made thereunder.

The representative in Switzerland is FundRock Switzerland SA, Route de Cité-Ouest 2, 1196 Gland, Switzerland. The paying agent in Switzerland is Banque Cantonale de Genève. The Prospectus, the Articles of Association and annual and semi-annual report, if any can be obtained free of charge from the representative in Switzerland. The place of performance and jurisdiction is the registered office of the representative in Switzerland with regards to the Shares distributed in and from Switzerland.

The Fund is not authorised or recognised by the Monetary Authority of Singapore (the “MAS”) and the Shares are not allowed to be offered to the retail public. This material issued in connection with the offer or sale of Shares is not a prospectus as defined in the Securities and Futures Act, Chapter 289 of Singapore (the “SFA”). Accordingly, statutory liability under the SFA in relation to the content of the prospectuses would not apply. You should consider carefully whether the investment is suitable for you.

This is not a legal document and only for information, for full details see Proxy P SICAV prospectus which can be requested by Proxy P Management AB or Fund administrator European Fund Administration.
